DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 4-6 and 12-14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Re: claim 4 and 12, the structure of "a radial axis" is not clear. The cage has only one axis that which the cage rotates.

Re: claim 5 and 13, the structure of "a bottom" is not clear. It is not clear as to how "the recess that widens outwardly from a bottom." It appears from the drawings that the recess widens outwardly from the inner wall.

Re: claim 6 and 14, the structure of the outlet that extends in a radial direction and extends parallel to said axis of rotation is not clear. The only outlet that extends parallel to the axis of rotation is the outlet of slot 26, however, this outlet is not oriented in a radial direction; rather, it extends in an axial direction.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 3682

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, 7, 9, 10, 15, 17, and 19 are rejected under 35 U.S.C. 102(e) as being anticipated by Daikuhara (USPN 6,402,368).

Daikuhara disclose at least one substantially closed storage space (23) for lubricant between two chambers (21) for rotating elements, said storage space comprising an inner wall, two lateral walls, an outer wall and at least one outlet (24) for the lubricant;

outlet extends radially (see Fig.2);

plurality of slots that divide an external face of said storage space into generally identical surface portions;

means for operating in depressurized state;

opening of said cage is substantially shaped as one of a cylinder, half sphere and a cone.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 3, 8, 11, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Daikuhara in view of Azuma (JP 10-220480).

Daikuhara discloses all of the instantly claimed invention except the outlet extends in a tangential direction of said cage.

Application/Control Number: 10/085,110 Page 4

Art Unit: 3682

Azuma shows an outlet (9), which extends in a tangential direction of said cage.

To modify the apparatus of Daikuhara so as to provide a tangential outlet would have been obvious to one of ordinary skill in the art at the time the invention was made in view of the teachings of Azuma that such an arrangement improves the ability to lubricate the rolling elements.

Response to Arguments

6. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
